SUMMARY

Computer Engineering student at Georgia Tech studying Cybersecurity, a well-rounded security engineer who both breaks and defends systems, from firmware up to web applications. Places in national CTFs across reverse engineering and exploitation, has hardened and monitored live systems through CyberPatriot, and wrote and audited firmware in C during an internship. Automates with Python and Bash and documents findings clearly for a team. Strong in C and Python. U.S. citizen.

SKILLS & CERTIFICATIONS

Security Engineering: Vulnerability discovery and assessment, penetration testing, web and binary exploitation, system hardening and monitoring, incident response, secure code review

Reverse Engineering & Embedded: Reverse engineering (Ghidra), firmware and embedded security in C, low-level protocols (MCTP, PLDM), wireless and RF analysis, assembly (RISC-V)

Networking & Systems: Networking (TCP/IP), Linux and Windows, packet analysis (Wireshark), digital forensics, virtualization

Development & Automation: Python, Java, C, JavaScript, Bash, PowerShell, SQL, security automation, CI/CD, Git

Certification: U.S. citizen, Google Cybersecurity Certificate, Security+ (in progress)

EXPERIENCE

Cybersecurity Head & Chief of Competitions — GSMST CS Club | Lawrenceville, GA Aug. 2022 – May 2025

- Placed in national CTFs, including 3rd at Lockheed Martin CyberQuest, across reverse engineering, binary and web exploitation, and forensics.
- Led a 30+ member club and its top team to three consecutive CyberPatriot National Semifinals, hardening and monitoring live systems and responding to intrusions.
- Scripted Python, Bash, and PowerShell automation to surface misconfigurations and speed up analysis across systems.

Firmware / Software Engineering Intern — American Megatrends (AMI) | Remote May 2024 – Jul. 2024

- Developed and audited firmware and communication protocols (MCTP, PLDM) in C for server hardware, implementing integrity-validation below the operating system.
- Debugged and validated protocol behavior against hardware specifications, tracing edge cases and failure conditions in low-level code.

AI & Machine Learning Instructor — iD Tech Camps | Atlanta, GA May 2026 – Jul. 2026

- Built an automated security-assessment system that provisioned vulnerable machines and scored them on exploitation and defense.
- Taught cybersecurity to 60+ students, walking them through real attack techniques and the mitigations that stop them.

PROJECTS

Binge | React, Node.js, PostgreSQL, Groq LLaMA Mar. 2026 – Apr. 2026

- Attacked and hardened a full-stack web app and its APIs against common weaknesses such as injection and broken access control, winning best project among 100+ students.
- Integrated an LLM with retrieval-augmented generation, and studied how such AI workflows can be abused and controlled.

Wireless Protocol Research (independent) May 2026 – Jun. 2026

- Reverse-engineered a commercial 900 MHz wireless system through independent signal analysis, characterizing its modulation, frequency-hopping behavior, and data format.

EDUCATION

Georgia Institute of Technology | Atlanta, GA Aug. 2025 – May 2028

B.S. in Computer Engineering, Concentration: Cybersecurity & Information Internetworks | GPA: 3.61, Dean's List

Relevant Coursework: Data Structures & Algorithms; Computer Communications; Objects and Design; Programming for Hardware/Software Systems | Activities: GreyHat

Gwinnett Technical College | Dual Enrollment, Cyber Crime Specialist Program, GPA 4.00 Aug. 2023 – Dec. 2024

Coursework: Information Security Fundamentals, Computer Forensics, Hardware Installation & Maintenance
